Project Name: Emoji Diary(for now)

08.26.2018

Developer: Jarvis Dong
University of Oregon

Overview

Making an iOS app that are able to record daily emotion, activities only with emoji. None emoji will not be recorded. All records are stored and can be presented chronologically.

Goals

1. Meet all required project criteria

2. Have fully specified layout using AutoLayout

3. Respect the MVC design pattern; appropriately separating concerns between the Modal, View, and Controller layers

4. Provide user some simple interface animation

5. (Optional) make every-day notification to inform user to record

6. (Optional) iCloud synchronization data support

Specifications

1. Besides what overview has covered, user can only record one entry per day.
2. User can also update their diary by editing or deleting the old ones.
3. Submitting text contains non emoji text will have a kind alert and only store the emoji part.

Milestones

Project will have 24 days and include 3 milestones. Plans are tentative but contains 3 steps as follow.

I.   Infrastructure

Todo list; Sketch storyboard; Scene designs

II.   Alpha

Functional; testing;

III.   Refinement

Animation
